

Fee Schedule & Procedure Price Benchmark 2026

Aesthetic & plastic surgery market rates — Pakistan, UAE, UK, USA

Structured as a knowledge base for the Treatment Plan module and RAG retrieval

What this document is — and what it is not

It is a compiled benchmark of what aesthetic and plastic surgery procedures actually cost in four markets in 2026, taken from published clinic price lists, national society databanks and patient-reported cost aggregators. Every figure carries a source reference and a data date, and every table states what the price does and does not include.

It is not a clinic's fee schedule. No figure here should be quoted to a patient as your price. Its purpose is to let you set, sanity-check and defend your own fee schedule, and to give the Treatment Plan module and the AI receptionist a grounded sense of what a realistic number looks like in each market.

Aesthetic pricing is not standardised anywhere. Two clinics on the same street quote different numbers for the same operation, and both can be honest. Treat every range as a distribution, not a target: the low end usually reflects a smaller case, a junior operator or an excluded cost, and the high end a complex case, a subspecialist or an all-inclusive quote.

Contents

1. Method, data quality and how to read every figure
2. Currency reference and the conversion rule
3. Anatomy of a price — what a fee is actually made of
4. Pricing models by procedure type
5. Pakistan — benchmark rates (PKR)
6. United Arab Emirates / Dubai — benchmark rates (AED)
7. United Kingdom — benchmark rates (GBP)
8. United States — benchmark rates (USD)
9. Cross-market comparison — the eight procedures patients compare most
10. Building your own fee schedule from this data
11. Treatment Plan module — data model and worked examples
12. Quoting governance and the rules the AI must follow
13. RAG packaging — chunking, metadata and retrieval
14. Source register

01 Method, data quality and how to read every figure

1.1 Where the numbers come from

Source type	What it gives you	Known bias
National society databanks (The Aesthetic Society, ASPS)	Large-sample averages of surgeon fees only in the US	Excludes anaesthesia, facility, implants and tests — typically 40–60% below the all-in figure a patient actually pays. Published on a lag.
Patient-reported aggregators (RealSelf)	All-in totals patients say they paid, in the US	Self-reported and unverified. Skews toward patients of surgeons who market on those platforms, so it usually reads high.
Published clinic price lists (UK, UAE, Pakistan)	Real, current, quotable numbers, usually 'from' prices	A 'from' price is the simplest case at that clinic. The realistic median sits well above it. Advertised offers are marketing, not market rate.
Directory and comparison sites	Medians across many clinics in one market	Quality of the underlying listings varies; some are lead-generation sites.

1.2 How to read a row

- Every range is the typical market band, not the absolute minimum and maximum that exists. Outliers in both directions are real and are noted where they matter.
- 'From' means the simplest case. Where a source publishes a 'from' price, the row says so. Never treat a 'from' price as the expected price.
- Surgeon fee versus all-in is the single biggest cause of confusion in aesthetic pricing. Each table states which one it is. Never compare a US surgeon-fee average against a UK all-inclusive package price and conclude the UK is expensive.
- Data dates are given per row or per table. Anything older than twelve months is flagged. Pakistani figures in particular move with the dollar, because most injectables, implants and devices are imported.
- Confidence is marked H / M / L: H = multiple independent 2026 sources agree; M = a single recent credible source, or sources that differ moderately; L = thin, dated or widely contradictory data, use only as a rough order of magnitude.

IMPORTANT

Nothing in this document is a clinical recommendation, a legal opinion or a guarantee of price. Cosmetic-surgery advertising is regulated differently in every market covered here — publishing or promoting these figures as your own prices may itself be a regulatory breach in the UAE, Saudi Arabia and the UK. Have your own fee schedule reviewed locally before it goes anywhere near a patient-facing channel.

02 Currency reference and the conversion rule

Indicative interbank rates, Pakistan market, July–August 2026 (State Bank of Pakistan and ECAP open-market closings). These exist so you can sanity-check the relative scale of the tables. They are not a conversion tool for quoting.

Currency	Approx. PKR per unit (mid-2026)	Note
USD 1	≈ 278	Ranged roughly 277–280 through H1 2026
AED 1	≈ 75.6	Pegged to USD, so moves only as the dollar moves
SAR 1	≈ 74.0	Also USD-pegged
GBP 1	≈ 374	The most volatile of the four against PKR

CONVERSION RULE

Never convert a price live in front of a patient, and never let the AI do it. Each market has its own approved price list in its own currency. A patient quoted in PKR and invoiced in USD — or quoted a converted figure that moves before surgery — is a complaint waiting to happen. If someone asks for a price in another currency, give the local price and say the final invoice is in that currency.

03 Anatomy of a price — what a fee is actually made of

A surgical fee is five or six separate costs presented as one number. Clinics differ mainly in which of them they bundle. Build your fee schedule line by line, then decide what to bundle — not the other way round.

Component	What drives it	Typical share of a surgical fee
Surgeon fee	Operating time, subspecialisation, case volume, revision complexity	40–60%
Anaesthesia	Type (local, sedation, general), duration, anaesthetist's grade	10–20%
Facility / theatre	Accreditation level, day case versus overnight, staffing	15–30%
Implants & consumables	Implant brand, grafts, cannulas, sutures, garments	0–25% (breast and body highest)
Pre-operative workup	Bloods, ECG, imaging, anaesthetic review	2–5%
Aftercare	Follow-up visits, dressings, garments, scar care	2–8%, often bundled in
Revision reserve	Your own policy on touch-ups within a defined window	Usually unpriced — and that is a mistake

3.1 Costs patients are routinely not told about

Travel and accommodation, time off work, childcare during recovery, extra garments, scar creams, and any revision procedure. For an overseas patient these can add 20–40% to the true cost of treatment. Put them in the written plan even though you do not charge for them — it is the single cheapest trust-builder available to a clinic.

04 Pricing models by procedure type

Model	Used for	How it is quoted	Watch out for
Flat / package	Most surgical procedures	One inclusive figure per procedure	Define exactly what is inside the package in writing, especially anaesthesia and follow-ups
Per area	Liposuction, laser hair removal, anti-wrinkle injections	First area at full price, additional areas discounted	Publish the additional-area rate; this is where quotes drift
Per unit	Botulinum toxin	Price per unit × units injected	Per-unit is the transparent model; per-area hides underdosing. Do not mix the two in one quote
Per syringe / per ml	Dermal fillers, skin boosters	Price per syringe or per millilitre	State the brand. A 1 ml syringe of one product is not equivalent to another
Per graft	Hair transplantation	Rate per graft × graft count, or a capped package	A package with an undisclosed graft ceiling is the most common complaint in this category
Per session / course	Lasers, peels, microneedling, PRP, body contouring	Single session and a discounted course of 3–8	Quote the course total, not just the session price — the course is the real cost

Model	Used for	How it is quoted	Watch out for
Time-based	Long multi-procedure operations	Theatre hour rate plus surgeon time	Rare in aesthetics but common for combined cases

05 Pakistan — benchmark rates (PKR)

Karachi, Lahore and Islamabad. Figures are all-in patient-facing prices as published by clinics and booking platforms, which in Pakistan usually include surgeon fee, theatre, anaesthesia and basic follow-up.

Islamabad and premium Lahore practices sit at the top of each band; Karachi sits mid-band; smaller cities below it. Because implants, toxin, filler and devices are imported, non-surgical prices here move with the dollar and should be re-verified quarterly.

5.1 Surgical

Procedure	Typical range (PKR)	Notes	Conf.	Src
Rhinoplasty — primary	150,000 – 300,000	Most commonly performed cosmetic surgery in Pakistan. Islamabad and senior Lahore surgeons quote 250,000–400,000; one Lahore practice publishes 325,000–400,000 inclusive of anaesthesia and medication	H	S21, S22, S20
Rhinoplasty — revision / septorhinoplasty	300,000 – 450,000+	Wider published band for Pakistan overall is 150,000–450,000; complex and revision cases occupy the top	M	S21
Liposuction — per area	60,000 – 130,000	Karachi platform listings start around 80,000–100,000 per booking	H	S19, S22
Liposuction — multi-area / 360	150,000 – 300,000	Karachi published band for 2026 is 80,000–300,000 overall; Lahore 75,000–175,000 for standard cases	H	S19, S20
Tummy tuck (abdominoplasty)	250,000 – 450,000	Frequently combined with lipo; confirm whether the quote is combined	M	S19, S22
Gynaecomastia surgery	120,000 – 250,000	Often quoted with liposuction included	M	S19
Breast lift	130,000 – 200,000	Published Lahore figure 130,000–150,000 (2024 data, likely higher now)	L	S22
Blepharoplasty (eyelid)	75,000 – 150,000	Upper only at the lower end; upper and lower at the upper end	M	S22
Otoplasty (ear correction)	55,000 – 90,000	Bilateral	M	S22
Brow lift	65,000 – 120,000		L	S22

5.2 Hair restoration

Procedure	Typical rate (PKR)	Notes	Conf.	Src
FUE — per graft	60 – 100	Major-city clinics. Karachi budget end runs 30–70 per graft; some smaller-city clinics quote 35–80, with variable quality	H	S23, S24
FUT (strip) — per graft	60 – 80	Cheaper per graft, leaves a linear donor scar	M	S23
DHI — per graft	+20–40% over FUE	Premium of roughly 20,000–50,000 per case for DHI or ICE-FUE in Karachi	M	S23, S24
1,000 – 1,500 grafts (session total)	55,000 – 110,000	Mild recession, hairline only	H	S23
2,000 – 3,000 grafts	90,000 – 210,000	The most common case size	H	S24

Procedure	Typical rate (PKR)	Notes	Conf.	Src
4,000 grafts	120,000 – 200,000	Islamabad published band	M	S28
5,000 grafts	150,000 – 250,000	Usually split across sessions	M	S28
Overall market band	60,000 – 400,000	Very large multi-session cases exceed 1,000,000	H	S23
PRP for hair — per session	8,000 – 35,000	Karachi spread is more than fourfold for the same named procedure. A six-session course at 15,000 is about 90,000	H	S25

5.3 Injectables, skin and laser

Treatment	Typical range (PKR)	Notes	Conf.	Src
Botulinum toxin — per treated area / session	18,000 – 30,000	Islamabad and Rawalpindi published band; 2024 source, so treat as a floor rather than a current rate	L	S28
Botulinum toxin — full vial (100 U), clinic-administered	49,000 – 55,000	Lahore clinic list price for an imported branded vial; the clinic states prices move with the dollar rate	M	S27
HydraFacial — per session	10,000 – 25,000	Karachi and Lahore; upper end reflects added boosters	H	S26
Dermal filler — per syringe	Verify locally	No reliable published 2026 band was found across Pakistani clinics; product cost is import-linked and clinic list prices vary too widely to benchmark honestly	L	—
Laser hair removal — per session	Verify locally	Priced by area and machine; large-city clinics charge materially more. Published data was too inconsistent to give a defensible band	L	—

GAPS ARE INTENTIONAL

Where this document says Verify locally, it means the published data was too thin or too contradictory to state a range responsibly. That is deliberate. A confident wrong number in a RAG knowledge base is far more damaging than an acknowledged gap — the model will quote it.

06 United Arab Emirates / Dubai — benchmark rates (AED)

All-in prices from DHA-licensed Dubai clinics and published cost guides. Dubai sits above Turkey and well below the UK and US for comparable work. Note that UAE health authorities restrict cosmetic advertising sharply — before-and-after imagery, discount promotions and superlative claims are constrained — so a published price list is one of the few marketing assets a clinic can legitimately use.

6.1 Surgical

Procedure	Typical range (AED)	Notes	Conf.	Src
Rhinoplasty — primary	18,000 – 35,000	One published DHA-licensed list sets primary at 35,000, tip correction at 27,000 and septum surgery at 23,000	H	S13, S14, S15
Rhinoplasty — revision	40,000 – 50,000	Revision at 50,000 and rib-cartilage harvest at 40,000 on the same published list	M	S13
Breast augmentation	20,000 – 35,000	Wider market band runs 19,000–60,000; premium implants and senior surgeons at the top	H	S14, S15

Procedure	Typical range (AED)	Notes	Conf.	Src
Breast lift	20,000 – 50,000		M	S14
Breast reduction	20,000 – 40,000	One published list: 26,000	M	S13, S14
Liposuction — single small area	10,000 – 15,000	Double-chin reduction sits at the bottom of this band	H	S15
Liposuction — abdomen and flanks	18,000 – 28,000	One published list: 25,000. Wider market 15,000–50,000	H	S13, S14, S15
Tummy tuck	25,000 – 40,000	Published list 30,000; wider band to 65,000 for extensive cases	H	S13, S14, S15
Brazilian butt lift	25,000 – 50,000		M	S14
Arm lift / thigh lift	20,000 – 50,000	Each	M	S13, S14
High-definition / six-pack contouring	20,000 – 40,000		M	S13, S14
Facelift	20,000 – 40,000	Mini facelift 18,000–30,000	H	S13, S15
Forehead lift	18,000 – 25,000	Ponytail brow lift published at 10,000	M	S13
Blepharoplasty	7,000 (upper) – 9,000 (lower)	Published starting prices; both lids together higher	M	S13
Gynaecomastia surgery	18,000 – 30,000		M	S13
Otoplasty	15,000 – 20,000		M	S13
Chin implant	20,000 – 27,000	Double-chin removal published at 7,000	M	S13
Labiaplasty	20,000 – 25,000		M	S13
J-plasma / skin tightening adjunct	15,000 – 35,000	Usually added to liposuction	M	S14

6.2 Injectables and non-surgical

Treatment	Typical range (AED)	Notes	Conf.	Src
Botulinum toxin — per unit	30 – 60	Allergan branded; Dysport and Xeomin usually lower per unit and not interchangeable	H	S16
Botulinum toxin — per area	800 – 1,500	The dominant model in Dubai. Forehead typically 10–30 units	H	S16
Botulinum toxin — three areas	2,000 – 4,000	Market-wide session band is 500–2,500 at the budget end and above 4,000 at premium clinics; heavily discounted entry offers from 299–499 are promotional, not market rate	H	S16, S17
Dermal filler — per syringe	1,200 – 3,500	Entry-level clinics publish from 450 for a small-volume area; premium brands and technically demanding areas such as tear trough sit at the top	M	S17, S18
Skin boosters	650 – 1,500	Published starting price from 650	M	S18
Biostimulators (e.g. collagen stimulators)	2,300 – 3,500	Per session, course usually 2–3	M	S18
Thread lift	4,000 – 5,000+	Advanced thread systems publish up to 5,000	M	S18

07 United Kingdom — benchmark rates (GBP)

UK surgical prices are usually quoted as a fully inclusive fixed price after the surgeon consultation: surgeon fee, anaesthetist, CQC-registered theatre, implants where applicable, and the aftercare programme. This makes UK figures look high next to a US surgeon-fee average, but they are not directly comparable. Most popular procedures cluster between £3,500 and £10,000.

7.1 Surgical — inclusive fixed prices

Procedure	Typical range (GBP)	Notes	Conf.	Src
Rhinoplasty — primary	£4,000 – £7,500	Market typical around £5,000. London specialist lists publish closed or open from £6,900–£7,500	H	S9, S8
Rhinoplasty — tip only	from £4,900	General anaesthesia, day case	M	S8
Rhinoplasty — septo / secondary / open	from £9,900	With rib cartilage graft, from £11,900	M	S8
Breast augmentation — silicone	£4,500 – £8,000	Saline £3,500–£6,000; fat transfer £4,000–£7,000. Major groups quote from £6,000	H	S9, S7
Breast uplift (no implant)	from £7,500		M	S8
Vaser liposuction — first area	from £4,000	Each additional area about £1,200; three areas from £6,000	H	S8
Chin and neck liposuction	from £3,500		M	S7
Facial liposuction	from £4,500		M	S8
Mini abdominoplasty	£7,000 – £8,000	One published package at £7,995 including up to three areas of liposuction	M	S10
Full abdominoplasty	£9,500 – £10,500	One package at £9,495 including up to three lipo areas; another list from £10,000; with liposculpture from £10,500	H	S10, S8
Gynaecomastia surgery	£4,500 – £5,500	One published package at £4,795 including liposuction to the same area	M	S10
Blepharoplasty — upper or lower	from £4,000	Local anaesthetic, day case	M	S8
Blepharoplasty — upper and lower	from £5,500	General anaesthetic, day case	M	S8
Brow / forehead lift	from £5,999		M	S8
Otoplasty	£2,500 (one ear) – £5,500	£3,500 both ears at one London clinic; another list publishes £4,500 unilateral and £5,500 bilateral — a good illustration of UK price spread	M	S7, S8
Chin implant	from £5,000		M	S8
Lip lift	from £3,500	Corner lip lift from £2,500	M	S7
Buccal fat removal	from £3,500		M	S7
FaceTite / AccuTite	from £3,500 / £2,500	Energy-assisted contouring	M	S7
Hairline lowering	from £7,000		L	S7
Earlobe repair	from £599		M	S8

7.2 Non-surgical

Treatment	Typical range (GBP)	Notes	Conf.	Src
Anti-wrinkle injections — one area	£100 – £200	Median across a 990-clinic sample sits inside a £100–£450 spread for one to three areas. Clinic lists commonly show £170–£199 for one area	H	S9, S11
Anti-wrinkle injections — two areas	£180 – £280	One London list: £210	M	S9
Anti-wrinkle injections — three areas	£250 – £450	A three-area treatment typically needs 30–60 units	H	S9
Dermal filler — per ml / syringe	£200 – £500	Commonly £150–£350 per ml at volume clinics; £200–£600 per syringe across regulated clinics. London runs 20–40% above regional	H	S11, S12
Dermal filler — complex areas	£400 – £800	Cheek augmentation, non-surgical rhinoplasty, tear trough	M	S12
Dermal filler — three syringes	£600 – £1,500	Typical multi-area session	M	S12
Laser hair removal — small area	from £30	Upper lip; sold as a course	H	S11
HydraFacial	from £99	Express tier; full and platinum tiers higher	H	S11

7.3 Finance — the UK norm

Interest-free finance over 12 months with a deposit of around 50% is standard, with 24–60 month plans commonly at 9.9–14.9% APR and minimum deposits around £1,000. A £4,500 procedure is widely advertised at roughly £79 per month over 60 months. If you serve UK patients, a finance partner is not optional — it is the expected way to pay.

UK ADVERTISING LAW

Botulinum toxin is a prescription-only medicine in the UK and cannot be advertised to the public. ASA and CAP rules also restrict promoting surgical cosmetic procedures in ways that trivialise them, pressure the patient, or reach under-18s. Publishing a factual price list is permitted; promoting a toxin brand or running a discount campaign on surgery is not.

08 United States — benchmark rates (USD)

The US has two parallel and frequently confused datasets. National society databanks publish surgeon fees only. Patient-reported aggregators publish all-in totals. Both are shown below side by side, because quoting one while a patient is reading the other is the most common pricing argument in the US market.

8.1 Surgical — surgeon fee versus all-in

Procedure	Surgeon fee only (society databank)	All-in, patient-reported average	Conf.	Src
Rhinoplasty	\$5,999 – \$6,324	\$11,412 – \$12,239 (range \$5,000 – \$25,000)	H	S1, S2, S3
Liposuction	\$2,764 – \$4,449	\$8,774 – \$9,251 (range \$3,500 for one small area to \$22,000 full body)	H	S1, S2, S3
Breast augmentation	\$4,617 (implants) / \$3,476 (fat grafting)	\$6,992	H	S1, S3
Breast lift	\$5,324	\$9,323	H	S1, S3
Breast reduction	\$6,308	\$10,106	H	S1, S3
Gynaecomastia surgery	\$4,385	\$8,685	H	S1, S3
Tummy tuck	\$7,465	\$11,917	H	S1, S3
Facelift	\$9,679	\$18,169	H	S1, S3
Neck lift	\$5,270	\$12,113	H	S1, S3
Eyelid surgery	\$3,387	\$6,163	H	S1, S3
Brow lift	\$3,514	\$8,681	H	S1, S3
Otoplasty / ear surgery	\$4,470	\$5,722	H	S1, S3
Chin augmentation	\$2,554	\$8,828	M	S1, S3
Labiaplasty	\$3,665	\$5,314	M	S1, S3
Arm lift	—	\$9,732	M	S3
Thigh lift	—	\$12,995	M	S3
Body lift	—	\$21,914	M	S3
Lip implants	—	\$2,967	M	S3
SmartLipo (laser-assisted)	—	\$6,408	M	S3
Mommy makeover (combined)	—	\$15,000 – \$22,000	M	S2

READ BOTH COLUMNS TOGETHER

The society figures above come from a databank published in 2022 and are surgeon-fee only; the all-in column is patient-reported and updated through 2025. Use the two as a floor and a ceiling, not as competing truths. Coastal metros (New York, Los Angeles, San Francisco, Miami, Boston) run 20–50% above these national figures; smaller Southern and Midwestern markets 10–25% below.

8.2 Injectables, skin and devices (2026 med-spa pricing)

Treatment	Typical range (USD)	Notes	Conf.	Src
Botulinum toxin — per unit	\$10 – \$20	Per-unit is the transparent model. A typical session uses 20–60 units	H	S4, S5, S6
Botulinum toxin — per session	\$200 – \$900	Per treated area \$200–\$600. Multi-area visits reach \$1,400. Society average per treatment \$326–\$435	H	S1, S4, S5
Botulinum toxin — annual maintenance	\$2,000 – \$3,500	Three to four sessions a year	M	S6
Dermal filler — per syringe	\$600 – \$1,500	National average about \$750; society average about \$715. Under \$400 a syringe is a red flag for product authenticity or injector experience	H	S4, S6
Dermal filler — per session	\$500 – \$3,500	Most first sessions use 1–2 syringes	M	S6
Non-surgical rhinoplasty (filler)	\$1,312 average	Range \$495 – \$2,850; lasts 12–18 months	M	S2
HydraFacial	\$150 – \$250	Platinum tier \$275–\$350+; clinic memberships \$99–\$179 a month	H	S4
Chemical peel — light / medium / deep	\$75–\$200 / \$200–\$600 / \$600–\$1,200	Society average per peel \$196	H	S1, S5
Laser hair removal — per session	\$100 – \$1,000	Small area \$100–\$300, medium \$200–\$500, large \$500–\$1,000. Six to eight sessions typical	H	S5
Body contouring (cryolipolysis, EMS, fat-dissolving)	\$600 – \$1,500	Per session; 2–4 sessions typical, and premium devices exceed \$2,000	H	S4, S5
Non-surgical skin tightening (ultrasound / RF)	\$1,500 – \$4,500	Results last 12–24 months; positioned at about a third of a facelift	H	S4
PDO thread lift	\$1,500 – \$4,500		M	S4
RF microneedling / laser resurfacing	\$800 – \$3,500	Per session	H	S5
Hair restoration (society average)	\$2,582	Surgeon fee basis	M	S1

09 Cross-market comparison — the eight procedures patients compare most

Local currency first, with an indicative USD equivalent at mid-2026 rates so the scale is comparable. Do not quote the USD column to anyone. It exists to help you position your own pricing and to answer the question every international patient asks: why is it cheaper there?

Procedure	Pakistan (PKR)	UAE (AED)	UK (GBP)	USA (USD, all-in)
Rhinoplasty — primary	150,000 – 300,000 ≈ \$540 – \$1,080	18,000 – 35,000 ≈ \$4,900 – \$9,500	£4,000 – £7,500 ≈ \$5,400 – \$10,100	\$11,412 – \$12,239
Liposuction — one area	60,000 – 130,000 ≈ \$215 – \$470	10,000 – 15,000 ≈ \$2,700 – \$4,100	from £4,000 ≈ \$5,400	\$3,500 – \$7,500
Tummy tuck	250,000 – 450,000 ≈ \$900 – \$1,620	25,000 – 40,000 ≈ \$6,800 – \$10,900	£9,500 – £10,500 ≈ \$12,800 – \$14,100	\$11,917
Breast augmentation	Verify locally	20,000 – 35,000 ≈ \$5,400 – \$9,500	£4,500 – £8,000 ≈ \$6,100 – \$10,800	\$6,992
Facelift	Verify locally	20,000 – 40,000 ≈ \$5,400 – \$10,900	Quote on assessment	\$18,169
Blepharoplasty	75,000 – 150,000 ≈ \$270 – \$540	7,000 – 16,000 ≈ \$1,900 – \$4,300	from £4,000 ≈ \$5,400	\$6,163
Botulinum toxin — 3 areas	Verify locally	2,000 – 4,000 ≈ \$545 – \$1,090	£250 – £450 ≈ \$340 – \$600	\$200 – \$900
Hair transplant — 2,500 grafts	150,000 – 250,000 ≈ \$540 – \$900	Verify locally	Verify locally	Verify locally

9.1 How to answer “why is Pakistan so much cheaper?”

Because the inputs are cheaper, not because the surgery is lesser: surgeon and staff salaries, theatre overheads, rent, insurance and medico-legal exposure are a fraction of US or UK levels, and there is no third-party payer inflating list prices. Where cost differences do reflect quality, it is in facility accreditation, implant provenance, anaesthetic cover and revision policy — which is exactly what a patient should be told to compare, and exactly what a clinic should publish. Never make the comparison by criticising another market or clinic.

10 Building your own fee schedule from this data

10.1 The eight-step method

1. Cost your theatre hour. Rent, staff, sterilisation, equipment amortisation, utilities, divided by realistic annual operating hours. This is the floor under every surgical price you will ever set.
2. Time every procedure honestly, including turnover. A 90-minute operation is a two-hour theatre booking.
3. Add the direct costs: implants, grafts, consumables, garments, drugs, labs.
4. Add the anaesthetic cost at the grade of cover you actually use.
5. Set the surgeon fee by seniority and case complexity, not by what the last clinic charged.
6. Compare the total against the benchmark band for your market in Sections 5–8. If you are below the band, check what you have forgotten to cost. If you are above it, you need a stated reason a patient can understand.

- 7. Decide the bundle and write the inclusions and exclusions down. This single document prevents most billing disputes.
- 8. Set review cadence: surgical prices annually, injectables and devices quarterly, and immediately on any currency move above 5% in an import-dependent market.

10.2 Positioning bands

Position	Where you sit in the benchmark band	What you must be able to evidence
Value	Bottom 25%	Genuine cost advantage — lower overhead, higher volume, simpler case mix. Never a lower safety standard
Market	Middle 50%	Comparable credentials and facility to the local median
Premium	Top 25%	Subspecialisation, case volume, accreditation, published outcomes, revision policy, concierge aftercare

11 Treatment Plan module — data model and worked examples

11.1 Price-list record schema

One record per procedure per market. Keeping market, currency and pricing unit on the record itself is what stops a US patient being quoted a PKR figure.

```
{
  "procedure_code": "RHINO-PRIM",
  "name": "Rhinoplasty - primary",
  "category": "surgical.facial",
  "market": "PK",
  "currency": "PKR",
  "pricing_model": "package",          // package | per_area | per_unit |
                                     // per_syringe | per_graft | per_session
  "price_from": 150000,
  "price_typical": 225000,
  "price_to": 300000,
  "additional_unit_price": null,
  "includes": ["surgeon_fee", "theatre", "anaesthesia", "pre_op_labs",
               "followups_12m"],
  "excludes": ["revision_surgery", "travel", "accommodation"],
  "consult_fee": 3000,
  "consult_fee_redeemable": true,
  "deposit": 25000,
  "deposit_refundable_hours": 24,
  "quote_validity_days": 30,
  "theatre_minutes": 150,
  "recovery_note_ref": "REC-RHINO",
  "requires_doctor_assessment": true,
  "publishable_to_patient": "range_only", // range_only | from_only | exact | never
  "source": "clinic_approved_v3",
  "last_reviewed": "2026-09-19",
  "next_review_due": "2027-03-19"
}
```

The field that matters most for the AI receptionist is publishable_to_patient. Surgical procedures should almost always be from_only or range_only; consultation fees and fixed non-surgical sessions can be exact. Anything marked never is a figure the bot must not state under any phrasing.

11.2 Treatment plan line-item structure

Line	Source of the figure	Shown to patient
Procedure(s) selected	Price-list record for that market	Yes — as a range until the doctor has assessed
Technique or complexity modifier	Doctor's assessment, entered post-consult	Yes — with the reason
Anaesthesia	Either bundled or itemised per your schedule	Yes
Facility / theatre	Bundled or itemised	Yes
Implants / grafts / consumables	Brand and quantity	Yes — name the brand
Pre-operative investigations	Fixed list per procedure	Yes
Aftercare included	Number of follow-ups, garments, dressings	Yes — explicitly
Explicit exclusions	Standing list	Yes — this is the trust-builder
Revision policy	Standing policy plus window	Yes

Line	Source of the figure	Shown to patient
Deposit and payment schedule	Standing policy	Yes
Quote validity date	Issue date plus validity days	Yes
Internal margin / cost basis	Cost model	No — internal only

11.3 Worked example — Karachi, liposuction, three areas

Line	Detail	PKR
Liposuction — first area (abdomen)	Package rate	110,000
Additional area 2 (flanks)	Discounted additional-area rate	70,000
Additional area 3 (back)	Discounted additional-area rate	70,000
Compression garment	Included	0
Pre-operative bloods and ECG	Included	0
Follow-ups — 4 visits over 6 months	Included	0
Plan total (indicative, pre-assessment)	Range quoted to patient: 230,000 – 260,000	250,000
Excluded	Revision surgery, travel, time off work, additional garments	—
Deposit to hold theatre date	Transferable with 24 hours' notice	25,000
Quote valid until	30 days from issue	—

11.4 Worked example — Dubai, overseas patient, primary rhinoplasty

Line	Detail	AED
Video consultation	Redeemable against treatment	500
Rhinoplasty — primary	Package: surgeon, theatre, anaesthesia	28,000
Pre-operative investigations	Bloods, imaging	1,200
Post-operative splint and dressings	Included	0
Follow-ups — 2 in person, then video at 3, 6 and 12 months	Included	0
Plan total (indicative, pre-assessment)	Range quoted: 28,000 – 33,000	29,700
Excluded	Flights, hotel, the 7 nights locally before flying, revision surgery	—
Deposit	Held against the theatre date	5,000
Quote valid until	30 days — reconfirm before travel	—

12 Quoting governance and the rules the AI must follow

These rules apply identically to the human coordinator and the WhatsApp AI receptionist. They are written as absolutes because that is how they must appear in the system prompt.

#	Rule
1	Quote only from the approved price-list record for the patient's detected market. Never from this benchmark document, never from memory, never from a competitor.
2	Always say "starts from" for any surgical procedure, and always name the currency in full (PKR, AED, GBP, USD).
3	Never convert currencies. Never quote two currencies in one message.
4	Never quote a final surgical price before the doctor's assessment. The pre-assessment figure is always a range.
5	Never negotiate, discount, price-match or invent a package. Discounts are approved by the practice manager only, and are restricted by advertising law in several markets.
6	Never quote from a photograph, a description of the concern, or a competitor's quote.
7	If the procedure is not on the approved list, say so and commit to a callback with a time in the patient's own time zone. Then do it.
8	Every written quote carries: currency, inclusions, exclusions, revision policy, deposit terms and a validity date.
9	Quote validity is 30 days by default, and must be reconfirmed before an overseas patient books travel.
10	Never state a figure whose record is marked publishable_to_patient: never, and never state internal cost or margin data in any form.
11	If a patient reports a price they were quoted elsewhere, acknowledge it without comment on the other clinic and redirect to what is included.
12	Re-verify injectable, device and implant pricing quarterly, and immediately after any currency move above 5% in an import-dependent market.

13 RAG packaging — chunking, metadata and retrieval

13.1 Chunk one procedure per record, not one page per chunk

A price table split arbitrarily across chunks is the classic failure mode: the model retrieves a number and loses the market, the currency or the inclusion note attached to it. Every chunk must be self-contained and must carry its own currency and market.

Good chunk
Market: Pakistan (PK) Currency: PKR Category: surgical.facial
Procedure: Rhinoplasty (primary)
Benchmark range: PKR 150,000 - 300,000 (typical market band, 2026)
Premium / revision: PKR 300,000 - 450,000+
Basis: all-in patient-facing price, usually includes surgeon, theatre, anaesthesia and basic follow-up
Confidence: High Data date: 2026 Source: S21, S22, S20
Caveat: benchmark only - quote the clinic's own approved fee schedule

13.2 Metadata to attach to every chunk

Field	Why the retriever needs it
market	Prevents a UK patient retrieving a PKR chunk — filter on this before semantic search
currency	Makes a currency error visible at generation time
category	Lets you route surgical and non-surgical questions differently

Field	Why the retriever needs it
basis	surgeon_fee_only / all_in — the single most misread attribute in this domain
confidence	Lets the prompt suppress low-confidence figures entirely
data_date and source_ref	Enables honest answers about how current a number is
is_benchmark	true here; false on your own approved price list. The bot quotes only records where this is false

THE ONE RETRIEVAL RULE THAT MATTERS

Load this document into the knowledge base as benchmark data only, with is_benchmark: true on every chunk, and configure retrieval so that patient-facing quoting can only draw from records where is_benchmark: false. Benchmark data answers your internal questions about market rates; it must never reach a patient as a quote.

13.3 Suggested prompt guard

If the retrieved pricing record has is_benchmark = true, you may use it only to reason internally. You must not state its figures to the patient. If no approved price record (is_benchmark = false) exists for the patient's market and procedure, say that you will confirm the exact figure and give a time you will come back.
